

FrontPage Extensions

- Standard Package installation
 - Requires admin password to install
 - For security reasons, we do not use Microsoft's web based "Admin Tools"
 - We provide "**Simple Configuration Utilities**" instead.
 - Only the root user can run these tools

Packages can be downloaded from the Cobalt Networks web site. If you do not have Internet access, contact Cobalt Networks to receive any package files. If you use Microsoft Internet Explorer 3, you may not see a "Browse..." button here and you cannot upload a file. Please obtain a newer browser.

Software On The Cobalt Microserver

Cobalt OS Patch (3700R) Release 1.0
Cobalt OS Release 3.0
FrontPage98 Server Extensions Release 3.0

FrontPage Extensions - Install Details

- Simple Configuration Utilities

- The FrontPage98 Server Extensions “Simple Configuration Utilities” are located in this directory: **/usr/local/frontpage/version3.0/bin/**
 - **enable.subweb** - configuration program for RaQ & Qube
 - Configures a directory to support Frontpage
 - **enable.site** - RaQ specific configuration program
 - Configures a site to support Frontpage
- Advanced configuration is available using the command:
 - **fpadmsrv.exe** - a utility that Microsoft provides
- When you install the package, a Frontpage <root web> is automatically created & configured.

Frontpage Extensions - Adding Frontpage Webs

- Example RaQ setup session

- Choose a site

- xyz.com

- telnet into the box as root
 - cd to the frontpage directory
 - run the setup script

- Select a frontpage user & password which need not be an actual user on the RaQ

- Wait about 15 seconds

- Site is now configured

```
[root bin]# cd /usr/local/frontpage/version3.0/bin
[root bin]# ./enable.site xyz.com joe joe
```

```
